The Honorable Paul Ryan  
Speaker  
U.S. House of Representatives  
H-232 U.S. Capitol  
Washington, DC 20515

The Honorable Nancy Pelosi  
Minority Leader  
U.S. House of Representatives  
H-204 U.S. Capitol  
Washington, DC 20515

Dear Speaker Ryan and Representative Pelosi:

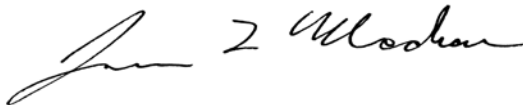

On behalf of the physician and medical student members of the American Medical Association, I am writing to urge you to take immediate action to make available the necessary resources to prepare our nation to address the growing threat of the Zika virus. As has been widely publicized, local vector-borne transmission is already occurring in several U.S. Territories and is expected in the U.S. mainland soon.

Physicians are growing increasingly concerned about the urgent need for ensuring that the public health community is fully prepared to address this public health threat. Resources are required to expand mosquito surveillance and control in potentially impacted jurisdictions, conduct public education and outreach, enhance laboratory testing capacity, and support vaccine development, among other necessary steps.

The impact on human health from Zika infection is well documented. Sufficient evidence now exists to infer a causal relationship between prenatal Zika virus infection and microcephaly as well as other severe brain anomalies. Congenital infection due to Zika exposure is also associated with vision-threatening eye abnormalities. There is also growing evidence that Zika virus is linked to Guillain-Barré syndrome. Physicians who are on the frontlines of diagnosing and treating those infected recognize that vigorous and thorough preparation is essential for the prevention and mitigation of potential outbreaks.

Time is growing short to make the critical investments that all agree are necessary to prevent local vector-borne transmission of the Zika virus and the potential health impacts of infection.

Sincerely,

James L. Madara, MD
