The Honorable Mary Elizabeth Coleman  
Chairwoman, Committee on Children and Families  
Missouri House of Representatives  
201 West Capitol Avenue  
Room 203-B  
Jefferson City MO 65101

Re: AMA Opposition to H.B. 33

Dear Chairwoman Coleman:

On behalf of the American Medical Association (AMA) and our physician and medical student members, I am writing to express our opposition to House Bill (H.B.) 33—legislation that would prohibit the provision of medically necessary gender transition-related care to minor patients and deem such care child abuse. We believe this legislation represents legislative intrusion into the practice of medicine and will be detrimental to the health of transgender children in Missouri.

Empirical evidence has demonstrated that trans and non-binary gender identities are normal variations of human identity and expression. Standards of care and accepted medically necessary services that affirm gender or treat gender dysphoria may include mental health counseling, non-medical social transition, gender-affirming hormone therapy, and/or gender-affirming surgeries. Clinical guidelines established by professional medical organizations for the care of minors promote supportive interventions based on the current evidence and that enable young people to explore and live the gender that they choose. Every major medical association in the United States recognizes the medical necessity of transition-related care for improving the physical and mental health of transgender people.

H.B. 33 would force physicians to disregard their oaths to act in the best interest of their patients and insert the government into clinical decision-making. Such decisions belong within the sanctity of the patient-physician relationship. As with all medical interventions, physicians are guided by their ethical duty to act in the best interest of their patients and must tailor recommendations about specific interventions and the timing of those interventions to each patient's unique circumstances. Such decisions must be sensitive to the child's clinical situation, nurture the child's short and long-term development, and balance the need to preserve the child's opportunity to make important life choices autonomously in the future. We believe it would be inappropriate and harmful for the state of Missouri to legislatively dictate that certain transition-related services are never appropriate and limit the range of options physicians and families may consider when making decisions for pediatric patients.

The Honorable Mary Elizabeth Coleman

In addition, evidence has demonstrated that forgoing gender-affirming care can have tragic consequences. Transgender individuals are up to three times more likely than the general population to report or be diagnosed with mental health disorders, with as many as 41.5 percent reporting at least one diagnosis of a mental health or substance use disorder.<sup>1</sup> The increased prevalence of these mental health conditions is widely thought to be a consequence of minority stress, the chronic stress from coping with societal stigma, and discrimination because of one's gender identity and expression. Because of this stress, transgender minors also face a significantly heightened risk of suicide.

Transgender children, like all children, have the best chance to thrive when they are supported and can obtain the health care they need. Studies suggest that improved body satisfaction and self-esteem following the receipt of gender-affirming care is protective against poorer mental health and supports healthy relationships with parents and peers.<sup>2</sup> Studies also demonstrate dramatic reductions in suicide attempts, as well as decreased rates of depression and anxiety.<sup>3</sup> Other studies show that a majority of patients report improved mental health and function after receipt of gender-affirming care. Medically supervised care can also reduce rates of harmful self-prescribed hormones, use of construction-grade silicone injections, and other interventions that have potential to cause adverse events.<sup>4</sup>

It is imperative that transgender minors be given the opportunity to explore their gender identity under the safe and supportive care of a physician. Passage of H.B. 33 would forestall that opportunity. This bill would subject physicians who follow guidelines from professional medical organizations to professional discipline. This is a dangerous intrusion into the practice of medicine and we strongly urge the members of the Committee on Children and Families to reject H.B. 33.

We thank you for the opportunity to express our views on this important issue. If you need further information, please contact Annalia Michelman, JD, Senior Legislative Attorney, AMA Advocacy Resource Center at [annalia.michelman@ama-assn.org](mailto:annalia.michelman@ama-assn.org).

Sincerely,

James L. Madara, MD
